Name	Label	Survey period	Survey frequency
------	-------	---------------	------------------

Further information

Company employees and turnover share of the divisions: Each company is assigned a weight based on the number of employees.

Weights by employees:

- [1] 1-99
- [2] 100-199
- [3] 200-349
- [4] 350-499
- [5] 500-699
- [6] 700-999
- [8] 1000-1499
- [10] 1500-1999
- [13] >1999

bau_weight exists retroactively in the data since 10/2023.

no data in 12/2001

Calculation of the weight:
 For the weights of the individual divisions of the company, the weight of the overall company is then multiplied by the sales share of the relevant division:
 Division weight = company weight * share of sales/100 (rounded, without decimal place, if 0 results, then set to 1)

Example: A building construction company with 400 employees (company weight = 4) and a 50% share of sales in residential construction would receive a weighting of 2 for reporting the residential construction division (4*50/100=2).
 The data is surveyed once a year in December.
